

“CardPak already has a culture of environmental products, processes and services. Now is the time to make the change. Retailers are demanding it and consumers want it. And quite simply it’s the right thing to do.”

– Tony Petrelli
 President
 CardPak, Inc.

EcoLogical Packaging

CardPak has developed sustainable packaging solutions that address both your needs as a manufacturer and the ecological demands of today’s leading retailers. Our *ClubPak™*, *SustainPak™* and *ShelfPak™* solutions offer you breakthrough design and execution that respects your budget, your product and our environment.

Our *EcoLogical Line of Packaging* eliminates up to 85% of the plastic currently used in your clamshell packaging and saves on overall material costs. It also uses more economical, environmentally-friendly materials and reduces harmful contaminants from the waste stream. In fact, *SustainPak* components are made from only 100% recycled paperboard and RPET blisters.

ClubPak, *SustainPak* and *ShelfPak™* are comparable in strength and security to clamshells and yet easier and safer to open for consumers. In addition, improved graphic capability gives your product greater shelf appeal and impulse purchasing power.

CardPak provides custom designs and innovative packaging solutions for your merchandising strategies. We offer a wide array of products that include blister cards, folding cartons, clamshell inserts, sleeves, skinboard and displays. Our blister cards come complete with either our new *AquaSeal™* coating or our special *PakSeal™* coating that is EPA-approved and FDA-compliant.

Safe & Easy-Open Package Design

Our unique package designs allow for easy storage and dispensing of product from multi-pack structures.

SUSTAINABLE PACKAGING SOLUTIONS

CardPak sales consultants are available to assist you in developing EcoLogical packaging products.
